Solution Brief Aedeon ChatGPT

Revolutionize
Data Insights with
ChatGPT™

Improve productivity by 5x using ChatGPT™ Integration with Mactores™ Aedeon® Data Lake on AWS, Amazon Redshift, and Snowflake.

Faster time to actionable insights

ChaptGPT integration with Aedeon Datalake on AWS, Amazon Redshift, and Snowflake allows business users to use natural language queries, eliminating the need to navigate complex user interfaces or memorize SQL syntax. This makes discovering and retrieving data faster, increasingly intuitive, and less prone to errors due to misinterpretation.

With integration of ChatGPT™, users can easily access the necessary information without investing time in building dashboards or reports or searching through datasets. This integration also leverages data from your sources to provide meaningful responses to chat interactions.

As a result, your business users can save time, and make better-informed decisions based on the insights they derive from their corporate data.
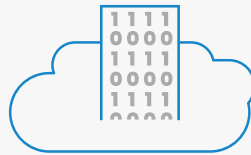

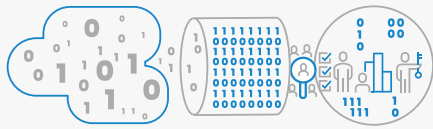

Improve standardization

Consistent and standardized way of querying data is helpful in organizations where different departments or individuals may use varying terminology when referring to the same data, leading to inconsistencies in queries and results. ChatGPT can help bridge this gap by standardizing queries and ensuring all users consistently access the same data.

Simplify your data access and governance

Facilitate the automation of platform tasks such as data classification, labeling, and anonymization. For instance, organizations can use ChatGPT to automatically classify sensitive data and assign the appropriate security and access controls. This helps to ensure compliance with data privacy regulations such as GDPR and PII.

Aedeon® ChatGPT ™ integration stands on three pillars:

Enable

Improved decision-making

Aedeon® ChaptGPT™ integration trains on your data and allows business users to gain insights using intuitive chat interactions. With traditional methods, business users spend hours or days manually extracting and analyzing data before arriving at a conclusion.

This integration streamlines this process by allowing users to input natural language queries, eliminating the need for technical expertise in data extraction and analysis. This enables businesses to make decisions more quickly, giving them a competitive advantage in a fast-paced market.

Govern

ABAC/PBAC access control

Providing a secure and efficient way to control data access, ensuring that only authorized users can access sensitive information. With traditional data access methods, users are often granted broad permissions to access data sets, which can lead to potential data breaches or unauthorized access.

Aedeon® ChatGPT™ integration enables enhanced security using ABAC (attribute-based access) and PBAC (policy-based access) to learn from the datasets attributed to each user. This significantly improves the data governance effectiveness for your data platforms.

Engage

Increased productivity

Executives, business users, or nontechnical users can chat with questions in natural language to identify actionable insights from the data. Such interactions act as game-changer for teams. Traditionally for new insights, business users must rely on technical teams to write SQL queries and build visualization dashboards. With Mactores™ Aedeon® ChaptGPT™ integration, business users will improve their productivity by 5x by intuitively interacting with the data.

Results: Faster time to insights without risks

At Mactores, we understand that each data platform is unique, and we take a tailored approach to integration. Our process begins with a comprehensive assessment, where we work closely with you and our integration experts to understand your platform's specific needs and requirements.

Our goal is to deliver results that exceed your expectations. To achieve this, we develop a detailed integration plan that outlines the specific strategies, processes, and technologies employed. By leveraging our advanced automated tools, we minimize risks and optimize efficiency, enabling faster time-to-market for your business users.

Imagine the possibilities for your business if you could offer your team powerful, easy-to-use interactive tools like ChatGPT™. With this cutting-edge technology, your team
